

**Artificial Neuron:**

$$\begin{array}{lll} X_1 = 5 & X_2 = 5 & X_3 = 2 \\ W_1 = 0.8 & W_2 = 0.4 & W_3 = 0.5 \end{array}$$

$$B = -6$$

$$Y = f(\text{Sum } w_i * x_i + B)$$

What is the output value Y for the above artificial neuron?

- ☐ 0.9  
☐ 0.97  
☒ 0.72

Yes, the answer is correct.

Score: 2

Accepted Answers:

0.72

Solution:

Given:

$$W_1 = 0.8 \quad W_2 = 0.4 \quad W_3 = 0.5$$

$$x_1 = 5 \quad x_2 = 5 \quad x_3 = 2$$

$$B = -6$$

Y=?

$$Y=f(\text{Sum}(W_i \cdot X_i)+B)$$

First we Solve,

$$\begin{aligned}\text{let } x &= \text{Summation}(W_i \cdot X_i) + B = (W_1 \cdot X_1 + W_2 \cdot X_2 + W_3 \cdot X_3) + B \\ &= 0.8 \cdot 5 + .4 \cdot 5 + 0.5 \cdot 2 - 6 \\ &= 4 + 2 + 1 - 6 \\ &= 1\end{aligned}$$

$$Y=f(\text{Sum}(W_i \cdot X_i)+B)=f(1)$$

f(x) is a Sigmoid Function.

$$f(x) = 1 / (1 + e^{-x})$$

Here  $e = 2.7182818281 \dots$

$$x=1$$

$$f(1) = 1 / (1 + e^{-1})$$

$$(e = 2.7182818281 \dots, 1/e = 1/2.7182818281 \dots = 0.3679)$$

$$y = f(1) = 1 / (1 + 0.3679) = 1 / 1.3679$$

$$y \approx 0.73 (\text{Approx})$$
